

Potentiometric Surface of the Unconsolidated Aquifers in Shelby County

by
Kathy Sprowls
Ohio Department of Natural Resources
Division of Water

This map shows the elevation of the ground water level that was measured from individual water wells completed in the unconsolidated (sand and gravel) aquifers within Shelby County.

Ground water potentiometric surface (water level) maps indicate the elevation and general direction of ground water flow. Ground water flows from areas of higher head elevations to lower head elevations in a direction perpendicular to the contour lines. This map only depicts the horizontal gradient.

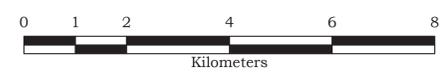

These maps could be used to determine ground water recharge and discharge areas, as input data into ground water modeling programs, and to locate monitoring wells in the correct locations to satisfy compliance monitoring. These maps could also be used to assist in preparing water resource plans, to assist in preparing technical studies, the mapping of stress areas, and in possible ground water diversion issues. Since these maps were created from existing data collected over a fifty-year period, field verification of the ground water flow direction should be conducted before any site specific work is conducted.

Legend

- 800— Ground Water Elevation, in feet
- Roads
- ~ Streams
- █ Lakes
- Townships

Contour interval is 50 feet. Contour elevations are measured from Mean Sea Level.

Black grid represents the State Plane South Coordinate System (NAD27, feet).

Disclaimer

This map was created using static water level readings from water well records collected over a 50 (+/-) year period. The Division of Water has technically reviewed this map but disclaims any responsibility or liability for interpretations or decisions based thereon. In no event shall the Division of Water have any liability whatsoever for payment of any kind, including but not limited to, any loss of profits arising out of use of or reliance on the maps.
